

URIEL NGUEFACK YEFOU

Senior AI Engineer — LLMs, RAG & Agentic Systems

Montreal, QC, Canada | 514-248-0144 | jordantamodjou@gmail.com

SUMMARY

Senior AI Engineer (7+ years) who has shipped production LLM and RAG systems used by enterprise clients — not just prototyped them. Built multi-agent automation pipelines that cut manual processing time by 45%, led MLOps infrastructure that lifted deployment reliability by 25%, and ran applied deep-learning research (CNNs, Vision Transformers) at a clinical research institute, presented at MILA. Comfortable owning a system from model architecture to production deployment to the metrics that prove it worked.

EXPERIENCE

Senior AI Engineer — YULCOM Technologies

Mar 2024 – Present

Montreal, QC, Canada

- **Cut manual document-processing effort by 45%** as measured by time-to-completion audits across three enterprise clients, by architecting RAG pipelines with vector search (FAISS, ChromaDB) and building multi-agent orchestration workflows (LangGraph) for autonomous document extraction and classification.
- **Improved retrieval accuracy by 30%** as measured by structured LLM evaluation benchmarks (RAGAS, human-in-the-loop scoring), by fine-tuning embedding models and iterating on retrieval strategy across GPT-4, Claude, Llama, and Mistral backends.
- **Increased production deployment reliability by 25%** as measured by uptime and rollback frequency across model releases, by building MLOps infrastructure with Docker, Kubernetes (multi-pod autoscaled clusters), MLflow, and CI/CD pipelines for automated model lifecycle management.
- **Reduced inference cost and latency for production LLM workloads** as measured by per-request token usage and response-time benchmarks, by implementing prompt-compression strategies, model routing, and caching layers across high-traffic semantic search and Q&A services.
- **Mentored and technically guided a 5-person engineering pod** as measured by on-time delivery of three enterprise AI products, by setting architecture standards, conducting code reviews, and pairing junior engineers on LLM integration work.

Senior AI Research Developer — Montreal Heart Institute

Jul 2022 – Mar 2024

Montreal, QC, Canada

- **Achieved top-tier predictive accuracy in genetic ancestry classification from ECG data** as measured by cross-validation and external dataset benchmarking results, by designing and training CNN and Vision Transformer architectures with rigorous validation methodology.
- **Enabled reproducible, auditable experimentation across the research team** as measured by reduction in experiment-to-publication turnaround time, by engineering end-to-end ML pipelines in PyTorch and MLflow with full versioning and lineage tracking.
- **Secured follow-up research collaborations with external institutions** as measured by post-presentation partnership inquiries, by delivering a keynote on explainable AI (XAI) methodology at the CMDO Symposium at MILA.
- **Bridged technical and clinical decision-making** as measured by adoption of model outputs into clinical research workflows, by authoring technical documentation translating deep learning methodology for non-technical stakeholders.

Full Stack Developer — Kamer Engineering Solutions SARL

May 2021 – Jul 2022

Douala, Cameroon

- **Delivered a production-grade computer vision platform for urban infrastructure management** as measured by successful deployment and adoption by municipal stakeholders, by owning the full development lifecycle from model serving to frontend delivery.
- **Enabled scalable real-time inference on aerial imagery** as measured by throughput under concurrent processing load, by building a Django REST Framework backend with asynchronous task queues to serve computer vision models.

- **Improved executive visibility into infrastructure data** as measured by adoption of dashboards in leadership reporting cycles, by integrating PostgreSQL infrastructure data with KoboCollect field survey data and Power BI reporting.

EDUCATION

Master's Degree, Data Science — AIMS Cameroon

Sep 2021 – Jun 2022

Master of Engineering, Industrial Robotics — National Higher Polytechnic School of Douala Oct 2018 – Aug 2021

SKILLS

LLM & Agentic AI: LangChain, LangGraph, RAG Systems, Prompt Engineering, Multi-Agent Orchestration, GPT-4, Claude, Llama, Mistral

Vector Search & Embeddings: FAISS, ChromaDB, Sentence-Transformers, OpenAI Embeddings, Cosine Similarity

ML / Deep Learning: PyTorch, TensorFlow, Keras, Scikit-learn, XGBoost, LightGBM, CNNs, Vision Transformers, Explainable AI

MLOps & Cloud: Docker, Kubernetes, MLflow, CI/CD, AWS, Azure, GCP, Snowflake

Engineering: Python, SQL, TypeScript, Django REST Framework, React.js, PostgreSQL, MongoDB

Data & BI: Power BI, Tableau, DAX, Pandas, NumPy, Jupyter

CONTINUED EDUCATION

- DeepLearning.ai Specialization — Neural Networks, Deep Learning, and Hyperparameter Optimization; TensorFlow Developer Fundamentals

LANGUAGES

English (Fluent) | French (Fluent)
